

Whole-brain group contrasts

Descriptive AVH- versus AVH+ t maps

A Sentences vs Reversed

B Speech vs Reversed

C Words vs Sentences

Two-sided voxel $p < .001$; $n = 45$ (AVH- = 22, AVH+ = 23); 10,000 permutations; covariates: age, IQ, and sex.
No cluster survives maximum-cluster-size FWER $p < .05$. Positive t is higher in AVH-; negative t is higher in AVH+.
