

A Post hoc adjusted effects

Targeted ANCOVA | Sentences vs Reversed

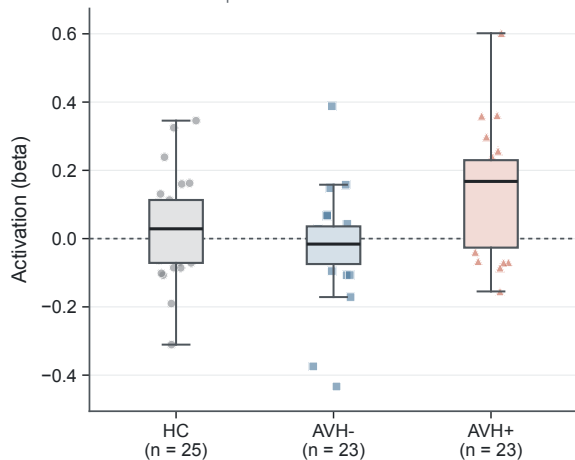

B Symptom association in AVH+

R STG posterior | Speech vs Reversed

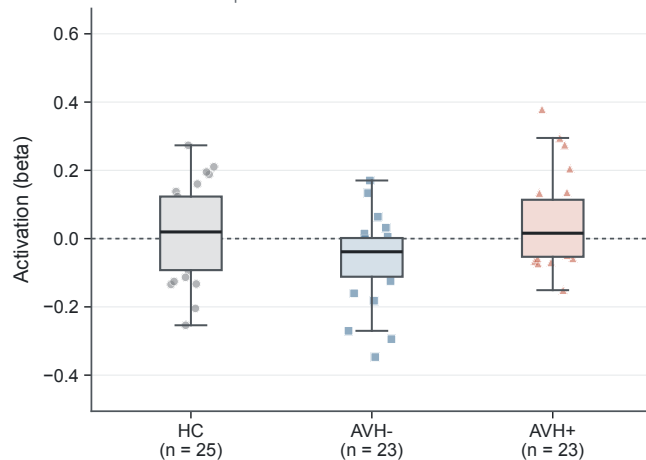

C L MTG activation

Raw values | Sentences vs Reversed

D L STS activation

Raw values | Sentences vs Reversed

A: post hoc targeted ANCOVA adjusted for age, IQ, sex, and mean FD (full $n = 69$); negative d indicates higher adjusted activation in AVH+.
B: age- and IQ-residualized values; shaded band is the 95% CI. C-D: unadjusted participant-level distributions.
