

Main results

Adjusted findings with participant-level context

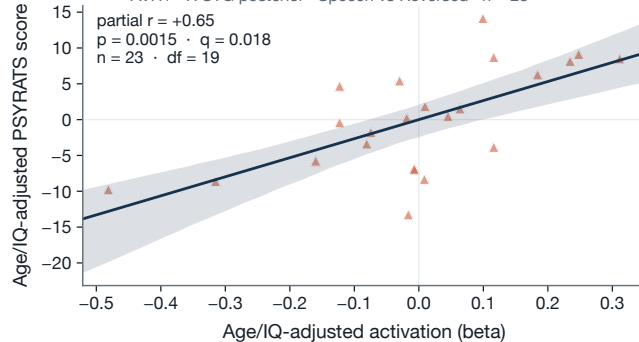

A Adjusted group differences

Cohen's d with 95% CI · Sentences vs Reversed

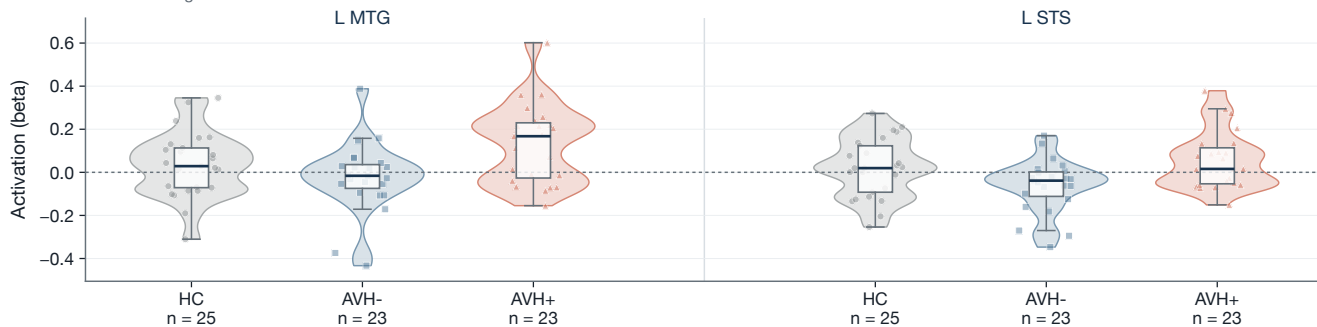

B Symptom association

AVH+ · R STG posterior · Speech vs Reversed · $n = 23$

C Participant-level activation

Raw regional values · Sentences vs Reversed

A · Adjusted effects

ANCOVA adjusted for age, IQ, sex and mean FD.
 95% CI; Bonferroni-adjusted p; full $n = 69$.

B · Symptom association

Age/IQ-residualized values; band shows 95% CI.
 AVH+ $n = 23$; $df = 19$.

C · Participant context

Raw beta values; violins show density.
 Boxes show median/IQR; points are participants.
